Forecast for Friday 11 Feb 2022

Weather: After a very cold night with a widespread frost, many ranges will be dry for most of the day. A few passing snow showers are possible from mid-morning until early afternoon across Monadhlaith, Creag Meagaidh and Ben Alder. Snow will spread from the west from mid-evening, this heaviest and most persistent across the southwest of the area with blizzard conditions developing here at height.

Chance of cloud-free hill tops above 800m: 80% for daylight hours, best chance across the Cairngorms

Low cloud and visibility: Good visibility expected for most of the day, briefly dipping in any snow showers. High cloud will make for rather flat light conditions in the afternoon. Some patchy cloud down to 800 metres across the west of the area, otherwise summits often clear of cloud during daylight hours. Cloud becoming widespread and lowering to 600 metres from the west after dark.

**Level above which ground is expected to be frozen/snow is expected to settle.*

Met Office Aberdeen Meteorologist's View
Summit gales developing in the afternoon, and storm force winds across the Cairngorm Plateau after dark. Combined with snowfall after dark this will make for some very hazardous conditions at height later in the day.

Forecast for Saturday 12 Feb 2022

Weather: Snow clearing away in the early hours, although snow confined to higher summits as freezing levels rise in the early hours. Then a windy day with frequent blustery showers, these falling as snow above 1000 metres at first, the snow level lowering to 800 metres by mid-afternoon. Temporary blizzard like conditions on the higher tops as snow showers pass by. Variable cloud cover, best chance of breaks will be in the northeast of the area.

Maximum wind: Strong southwesterly winds throughout the day, gusting 50 to 60 mph on the higher summits.

Chance of cloud-free hill tops above 800m: 50%, best chance in the northeast

Low cloud and visibility: Poor in areas of low cloud down to 700 metres, this variable in extent and most persistent across the west of the region. Ranges northeast of Cairngorm best placed to see some good cloud breaks given some shelter from the southwesterly wind.

Temperature: **Glens:** Plus 2 rising to 7 Celsius
At 800m: Plus 2 Celsius
Freezing level: 1200 metres falling to 1000 metres by late afternoon
